Standard Operating Procedure

Purpose: These guidelines will provide clear guidance for all pet and vet centers regarding vaccines and internal parasite control. This is essential for enhancing pet health and minimizing the occurrence of contagious disease in our centers. Adherence to these guidelines will create a safer and healthier environment for both pets and staff.

Destination Pet has adopted the AAHA canine and feline Vaccine Guidelines. See included guide.

Destination Pet highly recommends all dogs and cats be on heartworm, flea, and tick prevention.

Requirements for Boarding, Daycare, Grooming, and Training

[Frequently Asked Questions](#)

Vaccine Records

- As part of our commitment to upholding high standards of care, it is imperative that we meticulously document vaccine administration details for each pet.

- When recording vaccine information, ensure that you obtain verbal or physical confirmation from the pet's regular veterinarian's office.
- To calculate the expiration date accurately, subtract one day from the date of administration, and then add the specified duration (in months or years) for the vaccine's efficacy.
- It is important to enter the correct expiration dates into our Point of Sale (POS) system. Accurate data entry ensures that we can proactively monitor each pet's vaccination status and uphold compliance with our vaccine guidelines.

Local Regulations

- In tandem with our internal Vaccine Guidelines, it is also paramount that we stay aligned with local regulations. Each region may have unique requirements with health considerations. Become familiar with them and ensure compliance at your center.
